

A new approach to estimating hidden message length in stochastic modulation steganography	p. 1
Information transmission and steganography	p. 15
On the existence of perfect stegosystems	p. 30
Towards multi-class blind steganalyzer for JPEG images	p. 39
An efficient fingerprinting scheme with symmetric and commutative encryption	p. 54
Collusion secure convolutional spread spectrum fingerprinting	p. 67
Performance study on multimedia fingerprinting employing traceability codes	p. 84
Regular simplex fingerprints and their optimality properties	p. 97
A robust multi-bit image watermarking algorithm based on HMM in wavelet domain	p. 110
Robust detection of transform domain additive watermarks	p. 124
Multi-band wavelet based digital watermarking using principal component analysis	p. 139
A new inter-frame collusion attack and a countermeasure	p. 147
Effectiveness of ST-DM watermarking against intra-video collusion	p. 158
Oracle attacks and covert channels	p. 171
Security of DM quantization watermarking schemes : a practical study for digital images	p. 186
A survey of watermarking security	p. 201
Countermeasures for collusion attacks exploiting host signal redundancy	p. 216
Fingerprinting schemes : identifying the guilty sources using side information	p. 231
Practical data-hiding : additive attacks performance analysis	p. 244
The return of the sensitivity attack	p. 260
Look up table(LUT) method for halftone image watermarking	p. 275
New public-key authentication watermarking for JBIG2 resistant to parity attacks	p. 286
Software watermarking as a proof of identity : a study of zero knowledge proof based software watermarking	p. 299
Watermarking of 3D irregular meshes based on wavelet multiresolution analysis	p. 313
Digital watermarking robustness and fragility characteristics : new modelling and coding influence	p. 325
New geometric analysis of spread-spectrum data hiding with repetition coding, with implications for side-informed schemes	p. 336
Trellis-coded rational dither modulation for digital watermarking	p. 351
Closed-form formulas for private watermarking capacities of Laplacian sources with the magnitude-error distortion measure and under additive attacks	p. 361
Improved QIM strategies for Gaussian watermarking	p. 372
On the achievable rate of side informed embedding techniques with steganographic constraints	p. 387
Performance lower bounds for existing and new uncoded digital watermarking modulation techniques	p. 403
Evaluation of feature extraction techniques for robust watermarking	p. 418
Perceptual video watermarking in the 3D-DWT domain using a multiplicative approach	p. 432
Robustness enhancement of content-based watermarks using entropy masking effect	p. 444
Secure mutual distrust transaction tracking using cryptographic elements	p. 459
